

Summary

Srikanthreddy Kambala

Topic: Plagiarism

According to the article, there are many forms of plagiarism. Some of these practices are straightforward, such as buying papers or borrowing them. Others are more gray areas, such as copying large sections of text from the web without quotation marks and attribution. Even paraphrasing too closely from an original source can be plagiarism. It is also wrong to copy and paste other people's work. Using another person's material without their permission is plagiarism.

Although there are many ways to avoid plagiarism, it is crucial to follow these tips to avoid being caught. The first step is to recognize it when it happens. Plagiarism can be unintentional or intentional, but it must always be acknowledged and avoided. One must always cite the original source when citing someone else's work (Awasthi, 2019). It's not okay to copy someone else's essay. In addition to citations, students must include the original author's name in their paper and provide details of the author's work.

Using someone else's ideas is common in academic writing. Using someone's words and ideas without acknowledging their source is plagiarism. Using someone else's ideas or words without giving proper credit is a violation of copyrights. If one wants to avoid plagiarism, he or she should remember to keep track of their sources throughout the writing process. For example, if a student takes notes on a particular topic, he or she should ensure to use a quote whenever possible.

Critique

This is a reputable article. If I were to use it in my research, it would help me to discuss the meaning of plagiarism and how it can be avoided. Plagiarism is a serious offense and there is a need for students to understand it better.
